Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application.

LISTING OF CLAIMS:

1. (Currently amended) An access system for a computer site, comprising a certificate authentication component to verify a user's identity from a digital certificate supplied by the user,
a directory, coupled to the certificate authentication component, to maintain an account for each individual user, each account containing an access policy specifying at least one portion of the computer site to which the corresponding user is permitted access, and
an access control system, coupled to the directory, for controlling access to a computer site by permitting the user to access a portion of the computer site and restricting the user from accessing at least one other portion of the computer site, based on the access policy associated with the individual user in a directory.
2. (Original) An access system as in claim 1, wherein the access policy includes information representative of a portion of the computer site to which the user is permitted access.
3. (Original) An access system as in claim 1, further comprising a certificate authority component, coupled to the certificate authentication component, to issue digital certificates to the user.
4. (Original) An access system as in claim 1, further comprising a log system, coupled to the certificate authentication component, to record the user's actions in the computer site.

5. (Original) An access system as in claim 1, further comprising a transaction authentication system, coupled to the certificate authentication component, to provide verified records of transactions performed using the computer site.
6. (Original) An access system as in claim 5, wherein the transaction authentication system includes a digital signing module for validating transactions.
7. (Original) An access system as in claim 1, wherein the computer site is an extranet.
8. (Currently amended) A method of regulating access to a computer site, comprising receiving from a user a request to access a computer site or a portion thereof, receiving information representative of the user's identity, consulting a directory containing an account for each individual user, each account containing an access policy specifying at least one portion of the computer site to which the corresponding user is permitted access, to determine whether the user is permitted to access the computer site or portion thereof, and controlling access to the computer site by permitting the user to access a portion of the computer site and restricting the user from accessing at least one other portion of the computer site, based on the access policy for the individual user.
9. (Original) A method as in claim 8, wherein consulting a directory includes checking the access policy to determine a portion of the computer site to which the user is permitted access.
10. (Original) A method as in claim 9, wherein the receiving a request includes receiving a URL address for a site within the computer site.

11. (Original) A method as in claim 8, wherein receiving information representative of the user's identity includes receiving a password, a retinal scan, a fingerprint, or a document capable of being decrypted by a public key.
12. (Original) A method as in claim 8, wherein receiving information representative of the user's identity includes receiving a digital certificate.
13. (Currently amended) An access system for a computer site, comprising means for verifying a user's identity from a digital certificate supplied by the user, means, coupled to the means for verifying a user's identity, for maintaining an account for each individual user, each account containing an access policy specifying at least one portion of the computer site to which the corresponding user is permitted access, and means, coupled to the means for storing information, for controlling access to a computer site by permitting the user to access a portion of the computer site and restricting the user from accessing at least one other portion of the computer site, based on the access policy associated with the individual user in the means for storing information.
14. (Original) A access system as in claim 13, wherein the means for storing information includes information representative of a portion of the computer site to which the user is permitted access.
15. (Original) An access system as in claim 13, further comprising means, coupled to said means for verifying a user's identity, for issuing digital certificates to the user.
16. (Original) An access system as in claim 13, further comprising means, coupled to said means for restricting access, for recording the user's actions in the computer site.
